

SLD-16 LD-3 Instructions

Verify the authenticity of bills, banknotes, credit cards, checks, ID cards, passports and more with the SLD-16. The SLD-16 uses both UV and watermark detection to verify bill and document authenticity. Currency detectors are commonly used in department stores, grocery stores, kiosks, banks and other locations where money is handled. This unit is compact and can be moved from one location or cash register to another. We have guaranteed low prices on all our currency detectors. Order yours today!

1. Insert Bill in the examining area
2. Make sure machine is plugged in to the wall outlet
3. Press the 3 way switch until the blue light comes on.
4. Look for the UV strip on the bill as shown in the picture
5. Now press the 3 way switch until the white light comes on
6. Examine the bill for the water-mark which is a face image that only shows up when the light shows through the bill
